**Press Release**

**Cockpit4u Aviation Service starts training in Singapore**

After only 3 months since launch of the Boeing 777 type rating program, Cockpit4u Aviation Service has new markets in its sight.

“We are expanding our training capabilities in this important part of the world and will provide JAR-approved training solutions that will minimize travel time for the training needs of our local customers in Asia/Pacific. The trend towards the outsourcing of training services to providers such as Cockpit4u is also continuing in this region. Particularly low-cost airlines are falling back on this model. The advantages are obvious: cost transparency, flexible adaptation of training resources, no need to provide own trainers and low risk are only few points that should interest every CFO or flight operations manager. The basis for the success of this outsourcing model is a trusting partnership between the airline and the training provider”, said Dennis Pitz, Managing Director Cockpit4u.

“We are very excited to start with our training programs in Singapore,” said Stefan Heuss, Director Training. “This opportunity expands our capability to meet the increasing demands for JAR-approved aviation training in the region.”
